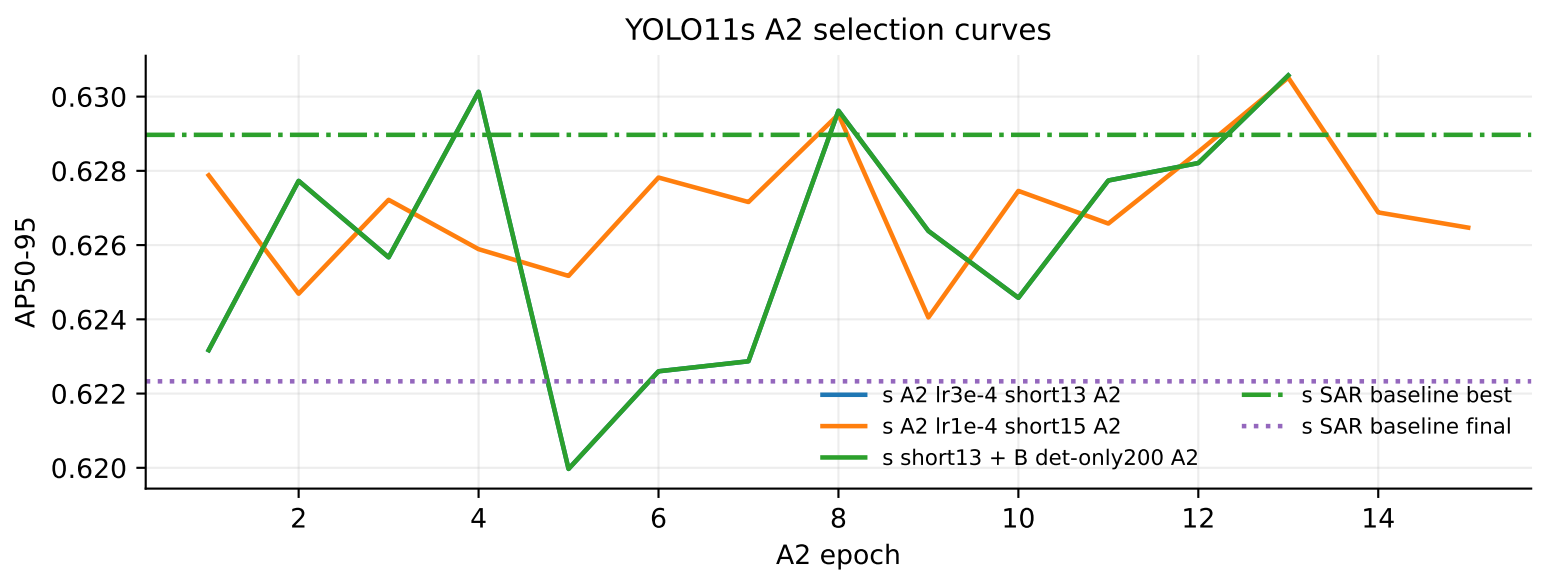

Figure 10 is a line graph showing the Average Precision at 50 and 95 (AP50-95) on the y-axis (ranging from 0.59 to 0.63) against the Phase epoch on the x-axis (ranging from 0 to 400). The graph compares the performance of several models and baselines. The 's SAR baseline best' (green dash-dot line) and 's SAR baseline final' (purple dotted line) are constant horizontal lines at approximately 0.629 and 0.623, respectively. The 's A2 lr3e-4 short13 B' (blue solid line) and 's A2 lr1e-4 short15 B' (orange solid line) are not visible, likely overlapping with the baseline. The 's short13 + B det-only200 B' (green solid line) starts at ~0.595, peaks at ~0.625 around epoch 50, and then gradually declines to ~0.618. The 's B alphaKD0.25 B400' (purple dashed line) starts at ~0.595, peaks at ~0.625 around epoch 50, and then declines to ~0.617. The 's B alphaKD0.5 B400' (red dashed line) starts at ~0.595, peaks at ~0.630 around epoch 150, and then declines to ~0.618.
